REASONS WHY THE COMMUNITY YOU CARE ABOUT NEEDS THE **VIBETECH 3**

- The VibeTech 3 is a tool that provides the benefits of exercise to people of all ages and ability levels by overcoming their barriers to physical activity.
- Treatments are safe, effective, reimbursable, and enjoyed by care recipients, treatment administrators, and loved ones who see progress being made firsthand.
- Caregiver burden is reduced:
 - (1) Stronger patient legs = less caregiver back strain during transfers
 - (2) On-screen user dashboard conveys progress, reinforcing the positive role the caregiver plays
 - (3) Easy to operate, so a loved one can supplement treatment administration where appropriate
- Designed for easy transport from room-to-room to deliver care where it is easiest and safest to reach those in need of more strength
- Can be used in all care settings; User data transcends the continuum of care
- Treatments are reimbursable (rehab and restorative nursing programs)
- Future-proof design: Software updates will keep the technology from getting old

ABOUT US

VibeTech is an early-stage, **NASA-Spinoff** company that builds strength in people for whom exercise is difficult (due to age, disability, injury, surgery, disuse). Our award-winning, patented, FDA class 1 AutoDosing™ therapeutic vibration system effortlessly contracts the muscles during robotic leg press exercises and adapts to the user's ability. Strength assessments and user engagement software are provided to promote better outcomes and to convey performance metrics.
